

Web Application Security Audit Certificate

Certificate No: IMS/2025-2026/0253

Audit Details

Audit Firm	:	IMPERIUM SOLUTIONS
CertIN Empanelment Reference	:	3(15)/2004-CERT-In (Vol. XIII)
Client Name	:	Ascentech Information Technology Private Limited
Scope of activity	:	Web Application Vulnerability Assessment and Penetration Testing (VAPT)
Application Name	:	Latur corporation
Production URL	:	Latur corporation : https://mclatur.org/
Tested URL	:	Not Available
Audit Duration	:	22 nd September 2025 – 9 th October 2025
SHA256 Hash	:	Not Available
Audit Methodology	:	OWASP, SANS, Cert-IN Advisory, OSSTMM, PTES, ISSAF
Auditor Details	:	Mr. Om Pagar
Certificate Issue Date	:	13 th October 2025
Certificate Validity	:	This certificate is valid till there are no changes in the application

Conclusion

The Admin UI, Agent UI and Integration UI web applications were scanned in the production environment. A total of eight vulnerabilities were identified in the previous audit; three low-risk vulnerabilities have been closed, and the remaining issues are still open.

Sr.no	Vulnerability Name	Severity	Final Status
1	Missing Security Headers	Medium	Closed
2	Out-of-date Version(JQuery Migrate)	Medium	Closed
3	Version Discloser (jQuery Migrate)	Low	Closed

The application can be hosted in the production environment after implementing the compensatory controls.

General Recommendations

Production Hosting Environment

1. Deploy a Web Application Firewall ahead of your application facing the Internet and allow only relevant traffic to flow to your web server.
2. Fine tune the firewall rules such that only specific ports and IP addresses are allowed access to your application.
3. Enable, capture and retain application logs to be able to trace a security incident, in case it becomes necessary to do so.
4. Utilise services of 3rd party vendors to check for malicious activities like web defacement, etc.
5. Ensure that the Operating system, database and application is hardened.
6. Ensure that the Operating Systems, Database and applications is the latest stable version.
7. Application should undergo security testing annually or whenever any changes are implemented in the application functionality, whichever is earlier.
8. Ensure that all vulnerabilities, irrespective of their criticality, are resolved asap.
